

Cross Road Storage Tank

The Cross Road Storage Tank is made up of glass fused to steel. The tank has a capacity of 0.48 million gallons of water. This capacity is allowed to fluctuate up to 15 feet. If the water level drops significantly the pumps activate to refill the tank. This maintains the 35 PSI needed to service the area, ensuring safe water for drinking as well as fire prevention use. The tank is 86 feet tall and has a diameter of 30.8 with an overflow elevation of 224 feet.
